

Unlabeled ASTHMA
High Blood Pressure

T E S T I M O N Y

Before I started drinking Forever Living Aloe Vera juice, I was on a breathing machine, and I took Theodor and Alupent. I also used an Alupent inhaler in between times. I had Emphysema, Bronchial Asthma, High blood pressure 200/110 and Degenerative arthritis of the spine.

My Doctor told me to start taking Forever Living Aloe Vera juice for my arthritis, so I did. Three days after I started drinking the juice my blood pressure went down to normal 120/70 and has remained at a normal level ever since. Three weeks after I started on the juice I quit using the breathing machine and with- in a month I stopped taking all my breathing medication. Six months later I had spinal x-rays taken and there was not a sign of the arthritis. I was drinking about 6 ounces of the juice a day, and still do every day. It has been 2 1/2 years ago since I started drinking Forever Living Aloe Vera Juice. Before that I had been hospitalized on several occasions for asthma and Bronchitis.

Signed,

Helen Stanley
