

MOUTH ULCERS

M.S.

November 14, 1979

TO WHOM IT MAY CONCERN:

For almost my entire life, I had suffered with mouth ulcers. No treatment, either by doctor or dentist or home remedies, had ever been effective and for weeks at a time, the inside of my mouth would be covered with ulcers that lasted at least three weeks from onset to healing. Then more would form almost immediately. In the summer of 1970, my dear friend, Patsy England, and I were troop leaders responsible for twenty or so third-grade Girl Scouts for a week of primitive camping in tents in East Texas. I arrived at camp with two full grown mouth ulcers, prepared to spend a miserable seven days unable to eat or sleep well. Patsy had just discovered AVA Aloe Vera Gel and had some with her. She had me pack the ulcers in my mouth with cotton wet with Gel for a whole day. I couldn't believe the relief I felt immediately; and was surprised and thrilled to find so much improvement the second day that I forgot I had them. By the third day, there was no soreness left and the ulcers had almost disappeared. Since that time, I have used the Gel as a mouth wash two or three times a week and simply do not have ulcers any more. I was skeptical at first, not being able to believe the Gel was really responsible for the fast disappearance of those ulcers. I have experimented many times - and skipped the Gel treatment - only to have ulcers soon forming again. Each time, the Gel would clear them up completely; and I no longer have any doubt about what cures them.
